

What Did You Say? A Web-Based Validation of a Speech-In-Noise Task

Rutgers University Center for Cognitive Science

Jason Geller, Ph.D. BeOnline 2021

Open-Set vs. Closed-set SiN Tasks

• Open-set

PLAY

Closed vs. Open-Set Tasks

- Closed-set
 - o Fall
 - Ball
 - Shawl
 - Wall

Issues

- Sentence-based (open-set) tasks are generally preferred as they are the most ecologically valid
- However:
 - Open-set tasks are difficult to use experimentally
 - Engages a whole host of processes not related to speech perception
- We need a closed-set task that better approximates everyday listening situations
 - Lexical competition
 - Talker variability

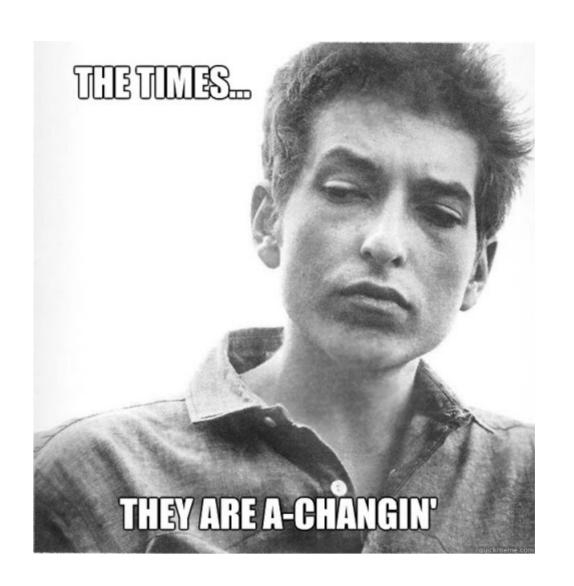

Iowa Test of Consonant Perception

- 4-AFC closed-set (single word) SiN task
 - 120 target words
 - Each target word belongs to a set and within the set appears as target and foil
 - Each word spoken by 4 speakers (2 women)
 - Minimal pairs differing by first consonant
- Uses multi-speaker babble

PLAY

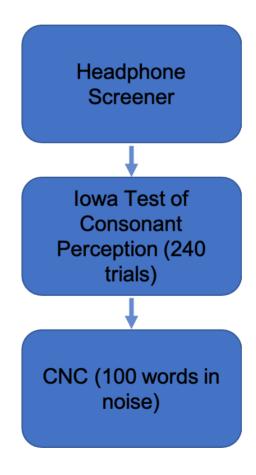

- All analysis scripts, materials, and data are available at our OSF page.
 - Roll your own ITCP

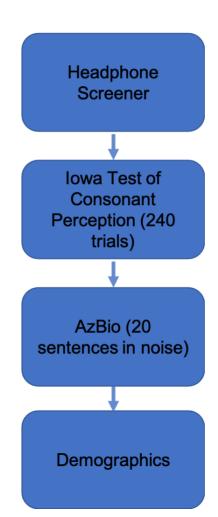

- Two sessions (spaced one week apart)
 - o Gorilla
 - Prolific

• Session 1 (*N*=199)

• Session 2 (N = 98)

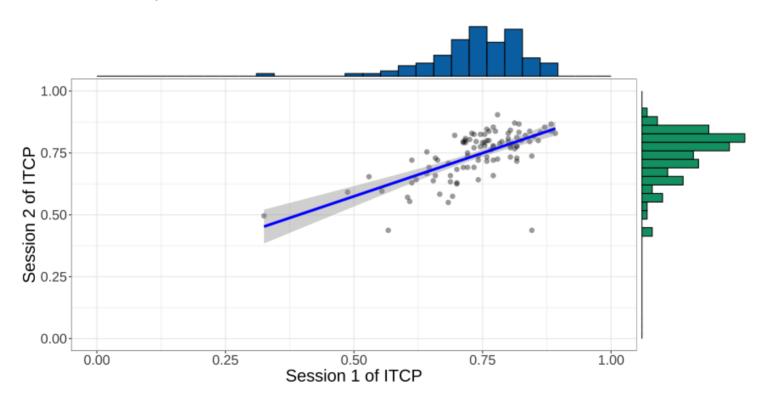

• Let's try it out! https://app.gorilla.sc/openmaterials/97811

Pilot

- Performance in Silence
 - ∘ *N* = 50
 - *M* = 95%

Reliability

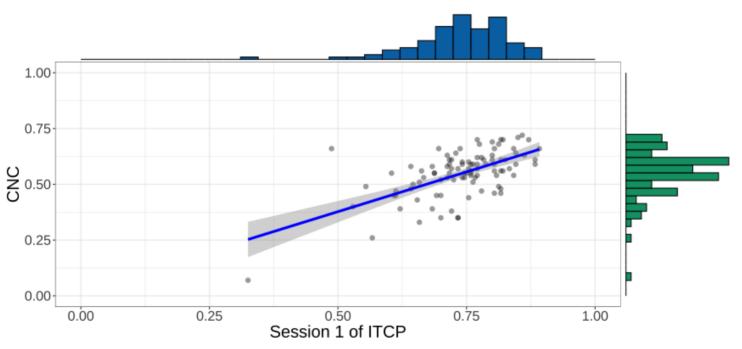

- Test-Retest
 - \circ ICC(A,2) = .80

Validity

Session 1 of ITCP and CNC

 $t_{\text{Student}}(96) = 6.25, p = 1.11\text{e-}08, \hat{\rho}_{\text{pb}} = 0.54, \text{CI}_{95\%} [0.38, 0.67], n_{\text{pairs}} = 98$

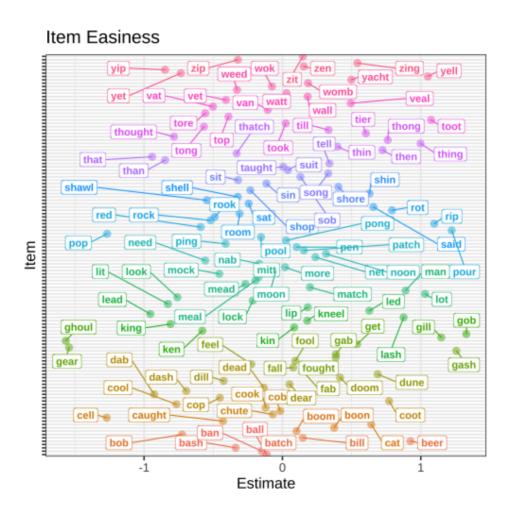

Validity

• Session 1 of ITCP and AzBio

 $t_{\text{Student}}(96) = 7.10$, p = 2.12e-10, $\hat{\rho}_{\text{pb}} = 0.59$, $\text{Cl}_{95\%}$ [0.44, 0.70], $n_{\text{pairs}} = 98$

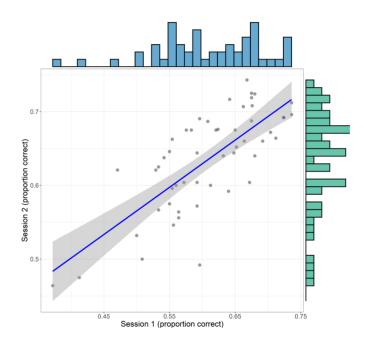

IRT Model

Future Directions

- Validation in lab
 - We do have data from 50 participants and data look comparable.
- Online testing for patients (e.g., hearing aid and cochlear implant users)
- Use it Experimentally

What Present Me Learned From Past Me

- Give bonuses for completing second session set up separate studies on recruitment platform
- Be explicit in your study description
- Email subjects multiple times to remind them of an upcoming session
- Try to make experiment length reasonable

Thank You
